

Welcome to
the last
session of

Tnano
2020

As you remember, we are broadcasting
from Tbilisi, capital of the Republic of
Georgia, for everyone to see.

was a spectacular workshop (at least to me)

- We spent three 16-hour days packed with presentations reporting cutting-edge science in sessions focused on
 - Magic Carbon
 - Applications of Graphene
 - Light-Matter Interaction
 - Moiré Magic
 - Superconductivity, Magnetism, and Charge Interaction in 2D
 - Meeting Editors of Physical Review
 - Defects
 - Non-Carbon 2D and 1D Structures
 - Non-Carbon 2D Devices
 - Other Nanostructures
- All presentations were live, synchronized across 24 time zones

I am humbled by your response to my life story

- Day 4 of Tnano20 started with a 30-minute presentation (did I keep my time?) of the organizer's life story as a Human and a Scientist.
- Then I asked the audience to share funny stories about me.
 - I thought I was generous to leave a full one hour for such stories/comments.
 - I was wrong - this appeared too short!
 - To keep the published schedule of Tnano20, I interrupted the comments about 15:00 UTC. I went to the next slide and closed Tnano20 officially.
 - (go to next slide and then come back)
 - I could not anticipate what happened next. The last Zoom Session Z19 remained open and very many participants continued with funny stories that involved me. May shared pictures (a benefit of a virtual conference). This lasted for almost two and half hours after closing, until about 17:20 UTC.
 - I believe **everybody was very tired (and ... I believe ... very content) by then.** This includes me.

I will now formally close

- I will again use the inflatable huge hammer and

CLOSE the
TNANO20 WORKSHOP
